The new premium solution for advanced endoscopy

The success of a procedure can hinge on your ability to clearly visualize the epithelial surface pit-pattern and vascular pattern. In addition to the already established i-scan modes, the OPTIVISTA now features i-scan OE (Optical Enhancement), creating a very unique platform where both digital and optical enhancements are available. This unique combination provides extra information for a more accurate in vivo diagnosis through improved vessel and mucosal pattern characterization.

The new PENTAX Medical OPTIVISTA EPK-i7010 video processor, together with the latest i10 HD+ endoscopes series, or with the MagniView, optical zoom endoscopes, provides our best image ever. Whether you are performing a routine procedure or a complex intervention, the EPK-i7010 can help you to achieve the best clinical outcomes.

A leap forward for in vivo histology with i-scan and i-scan OE, a unique combination of digital and optical enhancements

**Enhanced detection**
Sharp High-Definition image, combined with i-scan imaging and excellent illumination for a more detailed view of the mucosa and enhanced detection.

**Improved in vivo diagnosis**
A unique combination of digital enhancement (i-scan) and optical enhancement (i-scan OE) provides extra information for a more accurate in vivo diagnosis through improved vessel and mucosal pattern characterization.

**Powerful educational platform**
The TwinMode is perfectly designed to demonstrate the appropriate interpretation of image enhancement endoscopy by providing simultaneous comparison of side by side endoscopic images.

The integrated audio and HD+ video recorder enables to collect and share the latest scientific findings from the endoscopy room with fellows and peers.

Supporting the complete clinical pathway
**i-scan for enhanced detection and characterization**

i-scan technology is a digital, image enhanced endoscopy (IEE) technology by PENTAX Medical. As a virtual chromo-endoscopy tool, i-scan provides an enhanced view of the mucosal structures and vascular patterns, supporting early detection, demarcation and characterization.

**i-scan 1 (SE) for detection**

By enhancing the mucosal structure in a natural color tone, SE (Surface Enhancement) supports detection, especially of flat lesions by highlighting abnormalities.

With SE, the difference in luminance intensity between the pixels concerned and the surrounding pixels is analyzed and the edge components are enhanced. SE adjustment of the noise erasure function allows more evident enhancement of the edges, which corresponds to minor changes in structure.¹

**i-scan 2 (TE) for pattern characterization**

TE (Tone Enhancement) enhances the changes of vascular and mucosal structure with a color tone change, supporting pattern characterization.

The RGB components of an ordinary endoscope image are disintegrated into each component (R, G and B), and each component thus isolated is converted independently along the tone curve, followed by a reconstruction of the three components in one single image.¹

**i-scan 3 (OE) for vessel characterization**

i-scan OE displays the surface structures of the blood vessels, glandular ducts and mucosal membranes in a color tone and supporting vessel’s characterization.

PENTAX Medical has recently developed the i-scan OE (Optical Enhancement), an optical filter that produces bandwidth-limiting light. When combined with image enhancement processing technology it clearly displays the surface structures of blood vessels, glandular ducts and mucosal membranes in higher contrasts than white light.

OPTIVISTA, a powerful educational platform

The OPTIVISTA EPK-i7010 video processor is a state-of-the-art educational tool with customizable functions operated easily by the touch screen, or via the endoscope buttons.

Teach and assess with the unique TwinMode

- TwinMode is useful in teaching the appropriate interpretation of image enhanced endoscopy, providing simultaneous comparison of side by side endoscopic images.
- Among experts, TwinMode is respected appreciated as an educational tool for non-experts in "building the bridge" between HD+ white light images and the different i-scan modes and findings.
- The simultaneous comparison of enhanced clinical images is useful in teaching the appropriate characterization of lesions.

Collect and share with the unique integrated video and audio recording

- The video recording function enables capture of HD+ video files through a USB storage device, for fast and easy sharing of findings with peers. Audio recording for video is captured through external microphone.
- Contributes to cost savings in the endoscopy room by avoiding unnecessary external HD recording devices.
- For best image collection, the OPTIVISTA also incorporates freeze scan technology which automatically selects the sharpest picture.
